

WILEY SERIES IN PROBABILITY AND STATISTICS

Established by WALTER A. SHEWHART and SAMUEL S. WILKS

Editors: David J. Balding, Noel A. C. Cressie, Garrett M. Fitzmaurice, Iain M. Johnstone, Geert Molenberghs, David W. Scott, Adrian F. M. Smith, Ruey S. Tsay, Sanford Weisberg

Editors Emeriti: Vic Barnett, J. Stuart Hunter, Jozef L. Teugels

A complete list of the titles in this series appears at the end of this volume.

Time Series Analysis

Forecasting and Control

FOURTH EDITION

CONTENTS ix

| | | 3.3.1 | Invertibility Conditions for Moving Average Processes, 71 |
|---|--------|---|---|
| | | 3.3.2 | Autocorrelation Function and Spectrum of |
| | | 3.3.2 | Moving Average Processes, 72 |
| | | 3.3.3 | First-Order Moving Average Process, 73 |
| | | | Second-Order Moving Average Process, 75 |
| | | 3.3.5 | |
| | | 0.0.0 | Average Processes, 78 |
| | 3.4 | Mixed A | utoregressive–Moving Average Processes, 79 |
| | | 3.4.1 | Stationarity and Invertibility Properties, 79 |
| | | 3.4.2 | Autocorrelation Function and Spectrum of Mixed Processes, 80 |
| | | 3.4.3 | First-Order Autoregressive-First-Order Moving Average Process, 82 |
| | | 3.4.4 | Summary, 86 |
| | A3.1 | | riances, Autocovariance Generating Function, and |
| | | | ty Conditions for a General Linear Process, 86 |
| | A3.2 | | e Method for Calculating Estimates of |
| | | Autoregre | essive Parameters, 89 |
| 4 | Linear | Nonstatio | nary Models |
| | | | |
| | 4.1 | Autoregre | essive Integrated Moving Average Processes, 93 |
| | 4.1 | Autoregre 4.1.1 | Nonstationary First-Order Autoregressive |
| | 4.1 | | Nonstationary First-Order Autoregressive Process, 93 |
| | 4.1 | | Nonstationary First-Order Autoregressive |
| | 4.1 | 4.1.1 | Nonstationary First-Order Autoregressive Process, 93 General Model for a Nonstationary Process |
| | 4.1 | 4.1.1 4.1.2 4.1.3 | Nonstationary First-Order Autoregressive Process, 93 General Model for a Nonstationary Process Exhibiting Homogeneity, 95 General Form of the Autoregressive Integrated |
| | | 4.1.1 4.1.2 4.1.3 Three Ex | Nonstationary First-Order Autoregressive Process, 93 General Model for a Nonstationary Process Exhibiting Homogeneity, 95 General Form of the Autoregressive Integrated Moving Average Model, 100 |
| | | 4.1.1 4.1.2 4.1.3 Three Ex Moving A 4.2.1 | Nonstationary First-Order Autoregressive Process, 93 General Model for a Nonstationary Process Exhibiting Homogeneity, 95 General Form of the Autoregressive Integrated Moving Average Model, 100 plicit Forms for The Autoregressive Integrated Average Model, 103 Difference Equation Form of the Model, 103 |
| | | 4.1.1 4.1.2 4.1.3 Three Ex Moving A 4.2.1 | Nonstationary First-Order Autoregressive Process, 93 General Model for a Nonstationary Process Exhibiting Homogeneity, 95 General Form of the Autoregressive Integrated Moving Average Model, 100 plicit Forms for The Autoregressive Integrated Average Model, 103 |
| | | 4.1.1 4.1.2 4.1.3 Three Ex Moving A 4.2.1 4.2.2 | Nonstationary First-Order Autoregressive Process, 93 General Model for a Nonstationary Process Exhibiting Homogeneity, 95 General Form of the Autoregressive Integrated Moving Average Model, 100 plicit Forms for The Autoregressive Integrated Average Model, 103 Difference Equation Form of the Model, 103 |

X CONTENTS

| A4.3 | Arima Pr | ocesses with Added Noise, 131 |
|--------|-----------------------|---|
| | A4.3.1 | Sum of Two Independent Moving Average Processes, 132 |
| | A4.3.2 | Effect of Added Noise on the General Model, 133 |
| | A4.3.3 | Example for an IMA(0, 1, 1) Process with Added White Noise, 134 |
| | A4.3.4 | Relation between the IMA(0, 1, 1) Process and a Random Walk, 135 |
| | A4.3.5 | Autocovariance Function of the General Model with Added Correlated Noise, 135 |
| Foreca | sting | |
| 5.1 | Minimum Properties | n Mean Square Error Forecasts and Their s, 137 |
| | 5.1.1 | Derivation of the Minimum Mean Square Error Forecasts, 139 |
| | 5.1.2 | Three Basic Forms for the Forecast, 141 |
| 5.2 | Calculation | ng and Updating Forecasts, 145 |
| | 5.2.1 | Convenient Format for the Forecasts, 145 |
| | 5.2.2 | Calculation of the ψ Weights, 147 |
| | 5.2.3 | Use of the ψ Weights in Updating the Forecasts, 148 |
| | 5.2.4 | Calculation of the Probability Limits of the Forecasts at Any Lead Time, 150 |
| 5.3 | Forecast | Function and Forecast Weights, 152 |
| | 5.3.1 | Eventual Forecast Function Determined by the Autoregressive Operator, 152 |
| | 5.3.2 | Role of the Moving Average Operator in Fixing the Initial Values, 153 |
| | 5.3.3 | Lead l Forecast Weights, 154 |
| 5.4 | Examples | s of Forecast Functions and Their Updating, 157 |
| | 5.4.1 | Forecasting an IMA(0, 1, 1) Process, 157 |
| | 5.4.2 | Forecasting an IMA(0, 2, 2) Process, 160 |
| | 5.4.3 | Forecasting a General IMA(0, d, q) Process, 163 |
| | 5.4.4 | Forecasting Autoregressive Processes, 164 |
| | 5.4.5 | Forecasting a (1, 0, 1) Process, 167 |
| | 5.4.6 | Forecasting a (1, 1, 1) Process, 169 |

| xii | | | CONTENTS |
|-----|-------|--|----------|
| | 6.3.4 | Initial Estimates for Mixed Autoregressive—Moving Average Processes. | 216 |

- 6.3.5 Initial Estimate of Error Variance, 218
- 6.3.6 Approximate Standard Error for \overline{w} , 218
- 6.3.7 Choice Between Stationary and Nonstationary Models in Doubtful Cases, 220
- 6.4 Model Multiplicity, 221
 - 6.4.1 Multiplicity of Autoregressive–Moving Average Models, 221
 - 6.4.2 Multiple Moment Solutions for Moving Average Parameters, 224
 - 6.4.3 Use of the Backward Process to Determine Starting Values, 225
- A6.1 Expected Behavior of the Estimated Autocorrelation Function for a Nonstationary Process, 225
- A6.2 General Method for Obtaining Initial Estimates of the Parameters of a Mixed Autoregressive—Moving Average Process, 226

7 Model Estimation

- 7.1 Study of the Likelihood and Sum-of-Squares Functions, 231
 - 7.1.1 Likelihood Function, 231
 - 7.1.2 Conditional Likelihood for an ARIMA Process, 232
 - 7.1.3 Choice of Starting Values for Conditional Calculation, 234
 - 7.1.4 Unconditional Likelihood; Sum-of-Squares Function; Least Squares Estimates, 235
 - 7.1.5 General Procedure for Calculating the Unconditional Sum of Squares, 240
 - 7.1.6 Graphical Study of the Sum-of-Squares Function, 245
 - 7.1.7 Description of "Well-Behaved" Estimation Situations; Confidence Regions, 248
- 7.2 Nonlinear Estimation, 255
 - 7.2.1 General Method of Approach, 255
 - 7.2.2 Numerical Estimates of the Derivatives, 257
 - 7.2.3 Direct Evaluation of the Derivatives, 258
 - 7.2.4 General Least Squares Algorithm for the Conditional Model, 260
 - 7.2.5 Summary of Models Fitted to Series A to F, 263

CONTENTS xiii

- 7.2.6 Large-Sample Information Matrices and Covariance Estimates, 264
- 7.3 Some Estimation Results for Specific Models, 268
 - 7.3.1 Autoregressive Processes, 268
 - 7.3.2 Moving Average Processes, 270
 - 7.3.3 Mixed Processes, 271
 - 7.3.4 Separation of Linear and Nonlinear Components in Estimation, 271
 - 7.3.5 Parameter Redundancy, 273
- 7.4 Likelihood Function Based on the State-Space Model, 275
- 7.5 Unit Roots in Arima Models, 280
 - 7.5.1 Formal Tests for Unit Roots in AR Models, 281
 - 7.5.2 Extensions of Unit-Root Testing to Mixed ARIMA Models, 286
- 7.6 Estimation Using Bayes's Theorem, 287
 - 7.6.1 Bayes's Theorem, 287
 - 7.6.2 Bayesian Estimation of Parameters, 289
 - 7.6.3 Autoregressive Processes, 290
 - 7.6.4 Moving Average Processes, 293
 - 7.6.5 Mixed Processes, 294
- A7.1 Review of Normal Distribution Theory, 296
 - A7.1.1 Partitioning of a Positive-Definite Quadratic Form, 296
 - A7.1.2 Two Useful Integrals, 296
 - A7.1.3 Normal Distribution, 297
 - A7.1.4 Student's t Distribution, 300
- A7.2 Review of Linear Least Squares Theory, 303
 - A7.2.1 Normal Equations and Least Squares, 303
 - A7.2.2 Estimation of Error Variance, 304
 - A7.2.3 Covariance Matrix of Least Squares Estimates, 305
 - A7.2.4 Confidence Regions, 305
 - A7.2.5 Correlated Errors, 305
- A7.3 Exact Likelihood Function for Moving Average and Mixed Processes, 306
- A7.4 Exact Likelihood Function for an Autoregressive Process, 314
- A7.5 Asymptotic Distribution of Estimators for Autoregressive Models, 323

xiv CONTENTS Examples of the Effect of Parameter Estimation Errors on Variances of Forecast Errors and Probability Limits for Forecasts, 327 Special Note on Estimation of Moving Average Parameters, 330 333 **Model Diagnostic Checking** 8.1 Checking the Stochastic Model, 333 8.1.1 General Philosophy, 333 8.1.2 Overfitting, 334 8.2 Diagnostic Checks Applied to Residuals, 335 8.2.1 Autocorrelation Check, 337 8.2.2 Portmanteau Lack-of-Fit Test, 338 8.2.3 Model Inadequacy Arising from Changes in Parameter Values, 343 8.2.4 Score Tests for Model Checking, 344 8.2.5 Cumulative Periodogram Check, 347 8.3 Use of Residuals to Modify the Model, 350 8.3.1 Nature of the Correlations in the Residuals When an Incorrect Model Is Used, 350 8.3.2 Use of Residuals to Modify the Model, 352 **Seasonal Models** 353 9.1 Parsimonious Models for Seasonal Time Series, 353 9.1.1 Fitting versus Forecasting, 353 9.1.2 Seasonal Models Involving Adaptive Sines and Cosines, 354 9.1.3 General Multiplicative Seasonal Model, 356 9.2 Representation of the Airline Data by a Multiplicative $(0, 1, 1) \times (0, 1, 1)_{12}$ Model, 359 9.2.1 Multiplicative $(0, 1, 1) \times (0, 1, 1)_{12}$ Model, 359 9.2.2 Forecasting, 360 9.2.3 Identification, 367 9.2.4 Estimation, 370 9.2.5 Diagnostic Checking, 375 9.3 Some Aspects of More General Seasonal ARIMA Models, 375

Multiplicative and Nonmultiplicative

Preface to the Fourth Edition

It may be of interest to briefly recount how this book came to be written. Gwilym Jenkins and I first became friends in the late 1950s. We were intrigued by an idea that a chemical reactor could be designed that optimized itself automatically and could follow a moving maximum. We both believed that many advances in statistical theory came about as a result of interaction with researchers who were working on real scientific problems. Helping to design and build such a reactor would present an opportunity to further demonstrate this concept.

When Gwilym Jenkins came to visit Madison for a year, we discussed the idea with the famous chemical engineer Olaf Hougen, then in his eighties. He was enthusiastic and suggested that we form a small team in a joint project to build such a system. The National Science Foundation later supported this project. It took three years, but suffice it to say, that after many experiments, several setbacks, and some successes the reactor was built and it worked.

As expected this investigation taught us a lot. In particular we acquired proficiency in the manipulation of difference equations that were needed to characterize the dynamics of the system. It also gave us a better understanding of nonstationary time series required for realistic modeling of system noise. This was a happy time. We were doing what we most enjoyed doing: interacting with experimenters in the evolution of ideas and the solution of real problems, with real apparatus and real data.

Later there was fallout in other contexts, for example, advances in time series analysis, in forecasting for business and economics, and also developments in statistical process control (SPC) using some notions learned from the engineers.

Originally Gwilym came for a year. After that I spent each summer with him in England at his home in Lancaster. For the rest of the year, we corresponded using small reel-to-reel tape recorders. We wrote a number of technical reports and published some papers but eventually realized we needed a book. The first two editions of this book were written during a period in which Gwilym was, with extraordinary courage, fighting a debilitating illness to which he succumbed sometime after the book had been completed.

Later Gregory Reinsel, who had profound knowledge of the subject, helped to complete the third edition. Also in this fourth edition, produced after his untimely death, the new material is almost entirely his. In addition to a complete revision and updating, this fourth edition resulted in two new chapters: Chapter 10 on nonlinear and long memory models and Chapter 12 on multivariate time series.

This book should be regarded as a tribute to Gwilym and Gregory. I was especially blessed to work with two such gifted colleagues.

GEORGE E. P. BOX

Madison, Wisconsin March 2008

ACKNOWLEDGEMENTS

We are grateful to our editors Steve Quigley and Lisa Van Horn for their encouragement and help in producing this fourth edition and to Surendar Narasimhan for help with the final preparation of this manuscript.

G. E. P. B.

Preface to the Third Edition

This book is concerned with the building of stochastic (statistical) models for time series and their use in important areas of application. This includes the topics of forecasting, model specification, estimation, and checking, transfer function modeling of dynamic relationships, modeling the effects of intervention events, and process control. Coincident with the first publication of *Time Series Analysis: Forecasting and Control*, there was a great upsurge in research in these topics. Thus, while the fundamental principles of the kind of time series analysis presented in that edition have remained the same, there has been a great influx of new ideas, modifications, and improvements provided by many authors.

The earlier editions of this book were written during a period in which Gwilym Jenkins was, with extraordinary courage, fighting a slowly debilitating illness. In the present revision, dedicated to his memory, we have preserved the general structure of the original book while revising, modifying, and omitting text where appropriate. In particular, Chapter 7 on estimation of ARMA models has been considerably modified. In addition, we have introduced entirely new sections on some important topics that have evolved since the first edition. These include presentations on various more recently developed methods for model specification, such as canonical correlation analysis and the use of model selection criteria, results on testing for unit root nonstationarity in ARIMA processes, the state space representation of ARMA models and its use for likelihood estimation and forecasting, score tests for model checking, structural components, and deterministic components in time series models and their estimation based on regression-time series model methods. A new chapter (12) has been developed on the important topic of intervention and outlier analysis, reflecting the substantial interest and research in this topic since the earlier editions.

Over the last few years, the new emphasis on industrial quality improvement has strongly focused attention on the role of control both in process *monitoring* as well as in process *adjustment*. The control section of this book has, therefore, been completely rewritten to serve as an introduction to these important topics and to provide a better understanding of their relationship.

The objective of this book is to provide practical techniques that will be available to most of the wide audience who could benefit form their use. While we have tried to remove the inadequacies of earlier editions, we have not attempted to produce here a rigorous mathematical treatment of the subject.

We wish to acknowledge our indebtedness to Meg (Margaret) Jenkins and to our wives, Claire and Sandy, for their continuing support and assistance throughout the long period of preparation of this revision.

Research on which the original book was based was supported by the Air Force Office of Scientific Research and by the British Science Research Council. Research incorporated in the third edition was partially supported by the Alfred P. Sloan Foundation and by the National Aeronautics and Space Administration. We are grateful to Professor E. S. Pearson and the Biometrika Trustees for permission to reprint condensed and adapted forms of Tables 1, 8, and 12 of *Biometrika Tables for Statisticians*, Vol. 1, edited by E. S. Pearson and H. O. Hartley, to Dr. Casimer Stralkowski for permission to reproduce and adapt three figures from his doctoral thesis, and to George Tiao, David Mayne, Emanuel Parzen, David Pierce, Granville Wilson, Donald Watts, John Hampton, Elaine Hodkinson, Patricia Blant, Dean Wichern, David Bacon, Paul Newbold, Hiro Kanemasu, Larry Haugh, John MacGregor, Bovas Abraham, Gina Chen, Johannes Ledolter, Greta Ljung, Carole Leigh, Mary Esser, and Meg Jenkins for their help, in many different ways, in preparing the earlier editions.
